# Laveo's mission is to create remarkable products that are affordable and within the limits of kitchen and bathroom renovation budgets.

Laveo is a Polish brand whose heart beats in the industrial City of Łódź and whose roots go back much further than 2008, the year in which it was established. The brand has been built by a creative and committed Team that day by day develops a range of original interior design products. Products selected not only for the Company's portfolio but ones that we would also gladly see in our homes.

Laveo's offer includes mixers that have won numerous awards in design competitions. These collections have been appreciated for combining fashionable design with practical solutions for bathrooms and kitchens.

LAVEO TRENDY HOME DESIGN LAVEO TRENDY HOME DESIGN

Own brand means responsibility... Responsibility for product quality and safety. For us at Laveo, it means also concern about the environmental impact of our production facilities. It is the care for safe working conditions and our Team members' development. Furthermore, brand responsibility is sensitivity not only to global but also to local problems. Therefore, with each new collection, we strive to select components and raw materials so as to ensure the long-term flawless operation of our products. We tell you how to use and maintain them correctly to minimise your need for new purchases, thus reducing the environmental impact of our production facilities. Following the orinciple "more for less", we cover our products with extended warranties and service.

Thanks to many years of experience and with the use of Laveo brand products, our Team may participate each year in socially beneficial actions. Responding to requests of foundations and social organisations, we use Laveo products to support various renovation initiatives. This is our small contribution to solving problems of both local communities and chosen individuals

At Laveo, we know that own brand means responsibility - but also a huge satisfaction with the goals achieved.

Laveo products in investment projects carried out by interior designers.

## 3D SOLID MODELS AVAILABLE FOR DOWNLOAD AT WWW.LAVEO.PL

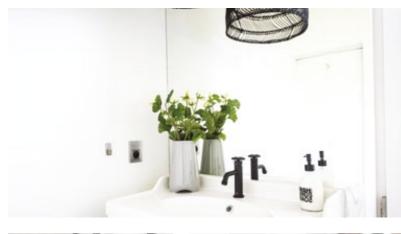

The variety of shapes, finishes, textures and functional solutions of Laveo kitchen collections speaks for itself. With such a portfolio of models, there can be no question of two similar kitchen designs, whether for your own home or if you are an investor.

You are limited only by your imagination. And we can help you solve this problem, too, by showing you realisations with our products, providing inspirations on our website or suggesting interior design solutions on our social media

The greatest honour for us are projects carried out by interior designers and architects for private investors. As they say, a picture is worth a thousand words... that is why we proudly present kitchens for which architects and interior designers have chosen collections by Laveo.

# To what bathroom style will Laveo products be well-suited?

Portfolio of bathroom furnishing products by Laveo is an extensive range of collections in which everyone will find something of their liking. Series are selected carefully in terms of quality and – maybe even first of all – stylistic variety.

Among our collections are items considered modern, classic and original not only in terms of form but also differentiated in colours. Our products are available in the finishes of traditional chrome, elegant black, universal graphite and trendy gold in yellow and rose shades. A special place in our offer, but also in our hearts, is occupied by loft-style series as Pretto and Muro, which are an expression of local patriotism and love for Lodz factory owners' roots.

The most extensive series in terms of number of models, such as Kvadrato, Pola or Pretto, allow for a comprehensive furnishing of a mini-bathroom and large bath suites.

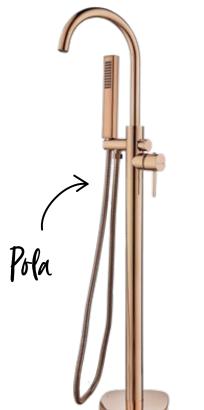

You do not have to stick to our inspirational recommendations tightly. We are pleased when our products become a part of original, extraordinary stylistic combinations and are an expression of unique arrangements. The best example of such non-standard approach to designing is the use of Laveo kitchen mixers in bathrooms. We are proud when our fittings, showers, washbasins or drains find their place in your bathrooms and you enjoy using them every day.

It is clear that glamour is a style for the bold. By definition it is supposed to draw attention and is associated with wealth and luxury. Its most distinctive element is gold, which appears most frequently in decorative additions and in fittings. It is a spectacular style yet dangerous as it is so easy to exaggerate here.

These are bright colours that are dominant on glamour-style wall and floor surfaces and considered a perfect background for glittering additions. Also very often they use a texture of marble, which evokes associations with wealth. If you happen to find any colours in a bathroom, they are intensive and deep. The most frequently selected colours are navy blue, bottle green which perfectly underline a luxurious character of the interior.

Glamour style also means stuccoworks, stylized handles and decorative mirror frames you would likely find around the greatest pieces of art. An important, if not a key, role is played by lighting which should be set to extract shine out of particular furnishing elements.

Rubio

"Remember that glamour style is not only as if living in a palace. It may take a more classic or modern form. Do not be afraid to ехрегітепt."

Due to the fact that gold finish in yellow and rose version in mixers and showers has been enormously popular in recent months, we are not bound at all to stylized retro models. In a bathroom in glamour style, mixers of modern shape, such as one found in Rubio collection, will look great, and in addition their shape resembles a cut precious stone.

You can confidently go for concealed models that are included in Pola series, or a gold-finished linear drain – Basso or Slim instead of a bathtub on decorative legs.

marble

Pinar

21

Classic style is a wide and universal concept. It is hard to contain it within any framework. However, for sure it is simplicity that counts in the classic. The fewer the  $% \left( 1\right) =\left( 1\right) \left( 1\right) \left$ ornaments, decorations and flashy colours the better. Here, white, beige shades and paler shades of grey will

A quintessence of bathroom furnishing in traditional interiors are chrome fittings. Nowadays on the market there is a wide range of products varied in terms of method of installation and shapes which provides you with almost unlimited arrangement possibilities. An interesting idea for a bolder approach to the classic are Pinar mixers, combining traditional chrome with more modern design. Rounded, slightly flattened shapes of bodies complemented by narrow levers will add modernity to an interior. It is also worth to combine chrome with white as in Alea, Largo or Raila collection models - you keep a simple character of an interior, though with an extraordinary combination of finishes. As far as ceramics is concerned, in classic bathrooms the white plays the main role. Method of installation of washbasins, toilet bowls or bidets is of less importance. Bright, clean, enamelled finish and rounded shapes are important - as in Desna models which, thanks to their universality, will suit most of additions perfectly.

In a bathroom furnished in the classic style there is also a place for neutral materials. Here, wood, wicker, bright stone or concrete, will be fine. A more visible colour accent can be introduced to an interior by providing living green pot plants.

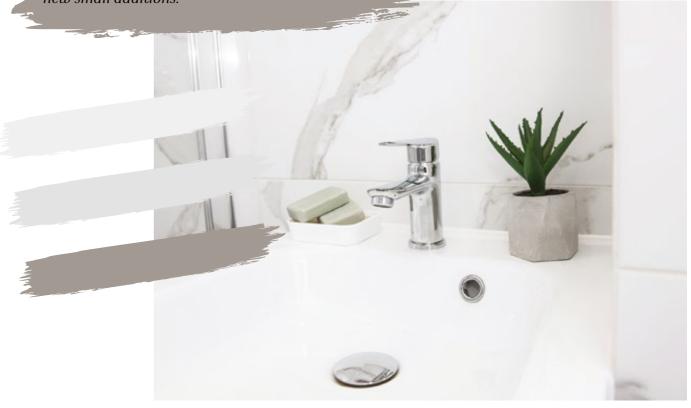

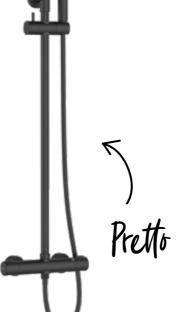

"An undeniable advantage of the classic is its timelessness. When deciding on this style in your bathroom, you are confident that the interior will be fashionable for years to come – all you need to do is to refresh it with some new small additions."

as synonymous to the industrial style."

black elements

Loft style was the most popular a few years ago. However it still has its dedicated followers who try to smuggle industrial furnishing elements to their interiors. You can say with full responsibility that its most distinctive features are black, mainly steel, elements, e.g. as muntins visible in shower cabins. With this, the main role in bathrooms is played by black – mostly matte – fittings. It does not mean that you should get rid of other finishes out of industrial interiors. Graphite or chrome mixers or showers will be fine here, as well. For your arrangement experiments pick Pretto series, a collection which is one of the most extensive in terms of types of models and methods of their installation in our portfolio.

Loft style is not only fittings or decorative strips but also impressive washbasins. Pola copper countertop washbasin or a version in deep black will be a perfect basis for arrangement combinations, both in terms of forms, and colours.

When arranging a bathroom in loft style, keep in mind that its dominant feature ought to be austerity. Here, concrete or brick walls will suit perfectly, best if they seem unfinished or slightly worn, with evident signs of use. Industrial style does not like exaggeration and is close to minimalism. Therefore when picking furnishing elements focus on inconspicuous ones. As far as shower is concerned, for example, Slim narrow steel grate will do the job. If however you are fond of decorative accents, it is worth looking for solutions which will underline the interior style. The best example here, are hydraulic knobs stylized as old factory owners' included in Muro collection.

23

Interiors in modern style are most definitely a proposal for minimalists. You will not find a large number of additions, complicated shapes and various colour combinations there. Modernity is mainly associated with simple forms, large areas and space. Such effect can be obtained by using the texture of concrete, stone or marble – best if in dark shades – in arrangements. Modern interior should go hand in hand with modern furnishing. Therefore it is worth picking products which not only have innovative shapes but also offer fresh solutions as far as use and installation are concerned. A perfect solution underlining modern simplicity under shower will be Basso wall drain. It is most of all due to its reversible grate can you replace it at any time, showing its full or tile-in version. Then, its design enabling edge-to-edge installation in a shower recess without any additional joints, allows to underline simplicity and austerity of the interior.

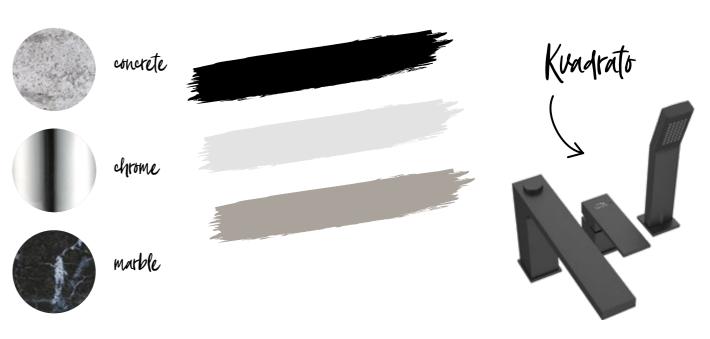

A modern bathroom will also go well with elegant and innovative fittings. A perfect solution here will be Volumo fitting collection, which, apart from featuring beautiful decorative rings, is fitted with start/stop cartridges in which the stream is started and stopped with a special push button. Those who are attached to traditional single-handle models might be interested in Kvadrato mixers, the geometric simple shapes of which are simply made for modern interiors.

Also traditional products can take innovative form, a perfect example of which is Mogami ceramic countertop washbasin. White and black was combined here, resulting in a modern, contrasting configuration.

27

Retro bathrooms are an expression of sentiment to the past. This style lets you go back to your childhood or youth times. With strong emotions, or even to further ages. Retro interiors are always warm and stylish, furnished with artificially aged furniture and additions. In furnishing elements, different types of abrasions, especially on wood and metal, are common.

If you dream of a retro bathroom, there is nothing to underline its old-style character as stylized fittings. First of all note the shapes. Overhead rain showers or rain showers designed as antiques, will be just perfect. If the effect is to be more subtle, fittings in classic chrome will do, but if you opt to distinctly underline the style, go for a finish in antique brass. Apart from that double-knob mixers with separate taps for cold and hot water are characteristic for retro style. Although such solution in the recent years gave way to single-handle mixers, it will fit in retro style without a shadow of a doubt.

In retro bathrooms, ornaments, roundings and gentle decorations are dominant. It is worth selecting a baroque washbasin, mirror in an ornamental frame or furniture on decorative legs. A perfect basis for all old-fashioned additions are floors and walls in black and white. Clear details, playing main roles in retro style, can be seen there. Also patchworks resembling granny bathrooms are a common motif on the tiles.

stylized accessories

antique brass

Wood

"A well-thought retro bathroom will ensure a pleasant journey through time. When choosing this style it is worth looking for additions which you remember from the real interiors of your relatives."

Although the word "vintage" itself is associated with something from the old times, the style given this name is an enormous source of various solutions. Vintage interiors are supposed to combine the old and the new within – it should be modern but with a soul. Their furnishing involves mainly introduction of authentic, old-time additions to new interiors.

Clear, geometric patterns, which are best exposed on a wall or inner furniture walls, are characteristic for vintage. Wallpapers, which just recently started to be used in bathrooms as well, are perfectly suitable here. When choosing the right material – vinyl, laminated or glass-fibre wallpapers, you can be sure of resistance to humidity in the room. On larger areas mini-tiles and mosaics, best if multi-colour, will suit as well. A cheap solution for furniture renovation and giving it a stylish appearance, are special furniture veneers which enable quick refreshment of an old cabinet.

The simplest way to underline vintage style is to use old furniture. In the recent years it has become trendy to restore old cupboards or upholstered chairs and arm-chairs. In a bathroom, a refreshed dressing table on which you can place a contemporary Desna or Albano washbasin with a modern concealed mixer, such as Pretto, will look just gorgeous. A puff upholstered with a material of a unique print will be just a perfect decorative element here, as well.

"Vintage style gets us back to 50-70's, when vibrant colours and geometric shapes were on top. Interiors always look noble and stylish."

# Granite washbasins by Laveo

Local Polish production of European quality.

Laveo washbasins are made at our own Factory of Granite Products, located in Poland.

Our production lines include numerical extruders, automatic mould conveyors, heat tunnels, mould annealing conveyors and a CNC machine tool.

Such an extensive stock of machinery provides unlimited production possibilities.

Product compliance with the standard: EN 14688:2006 - Sanitary appliances - Wash basins - Functional requirements and test methods / Attestation: Certificate of Health Quality of the National Institute of Public Health

Laveo means granite
washbasins designed
and manufactured at our own
factory with production lines
located in Poland.

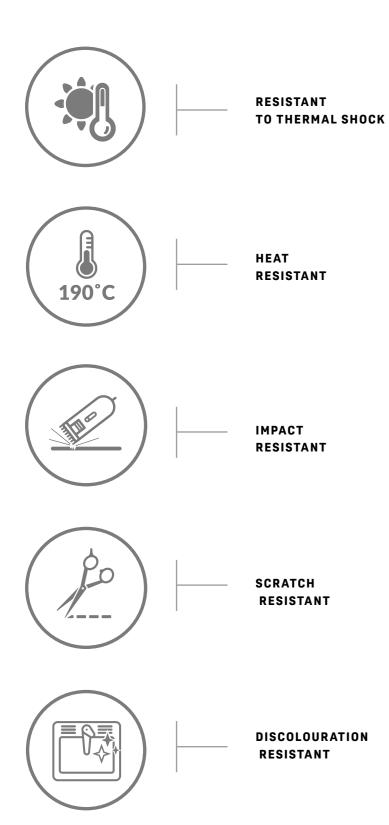

The Laveo granite sinks are manufactured in the 80:20 ratio from a mixture of granite, responsible for product durability, and polyester resin.

Numerous resistance features and adherence to simple maintenance and cleaning rules will ensure that your washbasin will be like new for a long time.

LAVEO TRENDY HOME DESIGN

The advanced production line, strict quality control and attention to detail allow us to cover our products by a 10-year warranty and service.

LAVEO TRENDY HOME DESIGN

Combination of the potential of own factory with loads of creativity of Maria Kubiak – Production Process Manager at Laveo, has resulted in transferring granite from kitchen to bathroom.

Two pilot series of granite washbasins, Albano and Amber, have proven to be hugely popular among business, as well as individual, customers, and architects. Both collections refer to natural earth colours: beige, grey and black. Fresh look on the material, previously associated with sinks, was recognised by a group of experts related to industry media, which resulted in the "Złota Villa 2022" (Golden Villa 2022) award for Amber series.

Granite washbasins are eagerly chosen by designers for arrangements in many various styles. For us it is a confirmation that intuition does not fail us and an evidence that we can set interior furnishing trends, creating products that are original and universal at the same time.

"I design for others as if it were for myself, so that they can feel as if it were just for them."

# Bathroom fittings – collections

Comprehensive solutions for any bathroom – collections of fittings by Laveo.

Due to the fact that with years our bathrooms are constantly evolving – to the joy of everyone – and grow in areas, at Laveo we try to guarantee possibilities for their comprehensive furnishing.

Bigger space allows to implement many solutions in a single interior. More and more often you can afford a shower together with a bathtub or a bidet. Two (and even three) bathrooms become a standard for newly built houses, or even apartments.

Laveo offer includes collections of fittings which enable outstanding furnishing of each of these solutions, abundant not only in terms of design and finishes but also models.

All bathroom series comprise classic models of washbasin mixers (low and high), wall-mounted bath and shower mixers or a bidet model. Such basis is complemented by concealed, free-standing products, showers in many different variants or an extensive offer of accessories.

The major part of collections of bathroom fittings is completed with sink mixers. Owing to this, we are able to create a stylistically coherent décor within the house or apartment in all sanitary rooms.

PN-EN: 817:2008 – Sanitary tapware - Mechanical mixing valves (PN 10) – General technical specifications / PN-EN: 1112:2008 – Armatura sanitarna – Wyloty natrysków do armatury sanitarnej do systemu zasilania typu 1 i 2 - Ogólne wymagania techniczne (do baterii z zestawem natryskowym) / PN-EN: 1113:2015 – Sanitary tapware – Shower outlets for sanitary tapware for water supply systems of type 1 and type 2 – General technical specification (for mixers with shower set) / PN-EN 15091:2014-02 – Sanitary tapware – Electronic opening and closing sanitary tapware (sensor mixers) / PN-EN: 1111:2017-09 - Sanitary tapware – Thermostatic mixing valves (PN 10) – General technical specification.

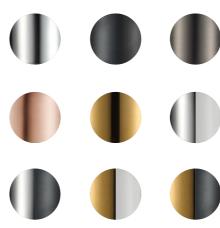

# Bathroom mixers by LAVEO is a choice for years.

Not all mixer taps are the same... Those bathroom fittings by Laveo are manufactured of high-class brass, depending on collection.

Our products are fitted with cartridges manufactured by the internationally recognised Spanish company Quore. The material of which a bathroom mixer tap is made is extremely important for its longevity, especially as such mixers are often used a lot.

Quality parameters make Laveo cover fitting collections by 8-years warranty and ensure a service at customer's location under warranty conditions.

Laveo collections mean original design confirmed by design awards. You will also find here a variety of finishes to choose from, starting with universal chrome, through colours matching interior arrangements and fashionable black, to end with unique graphite, or the most fashionable of late - gold.

Extensive range of models, for both small bathrooms and master bathroom suites, interesting design and proven components make such products a true decoration of any interior. Laveo brand offers classic, minimalistic and even loft models.

This also means variety of models guaranteeing easier adaptation to users' needs. As for bathroom mixers you can choose from models of various shapes, i.e. upright, countertop, with L-shaped spout, for concealed installation, wall-mounted.

# Shower area under a special surveillance.

Although showers form a separate category in our portfolio, we design and select the models to give our customers a possibility to create a set that will go together with Laveo products available in other groups.

We try to keep variety of styles and colour uniformity. Part of hydrotherapy are elements complementing bathroom mixer series. Other products, forming collections strictly related to showers, can be mixed freely – to match or contrast – other products from Laveo offer.

Our offer includes shower columns with or without mixers, riser rail or single-point sets, and hand showers. To create a perfect, complete arrangement a wide range of accessories is useful.

To make use of our hydrotherapy products easy as much as possible, we applied some solutions to improve their functionality. Keeping everything clean will be facilitated by anti-calc system enabling quick and effective elimination of limescale from hard water. Anti-twist system prevents and unaesthetic tangling of shower hoses. Adjustable fitting spans enable installation of a new model with use of holes after the previous one. Adjustable height of overhead rain shower and multi-functional hand showers allow for adapting bathing to own individual needs.

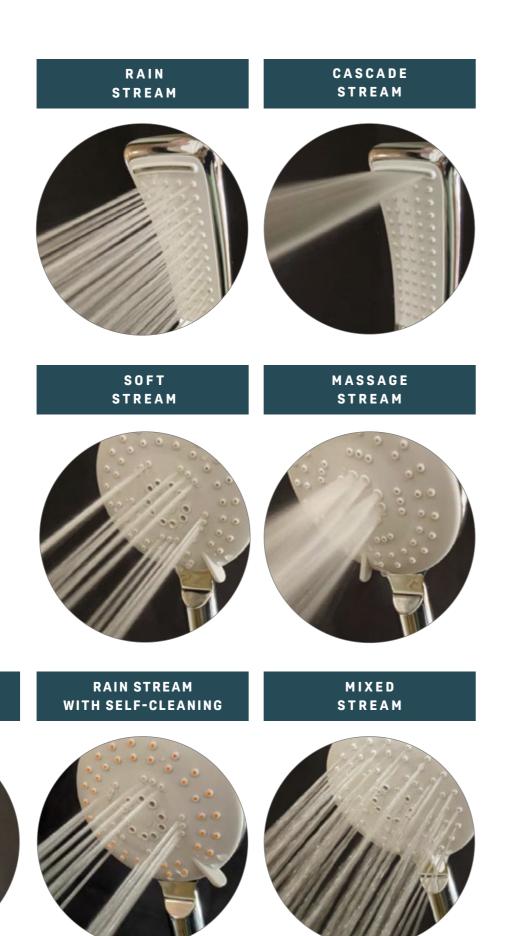

\* applies to shower mixers

# Concealed sets are a solution for space saving and minimalistic design.

Concealed systems are the most popular in shower area. They are a reply to the needs of users of small-sized bathrooms in which every scrap of space is at the premium. The concept of concealed elements was indeed space saving, though with time they started to be chosen first of all for visual reasons.

Concealed mixers provide an interesting and minimalistic effect. They are associated with modern approach to designing. Their advantage is a specialized box which the vast majority of models offered by Laveo are fitted with. With this you not only can install a mixer in a comfortable way but also ensure a free access to its enclosed parts when in use. Concealed box guarantees non-intrusive possibility to maintain mixer body.

Showers are followed by bath mixers which in concealed version come as wall-mounted and floor variants. These models enable creating of a coherent arrangement of bathrooms where shower is also accompanied by a tub. In such case surely stylistic aspects prevail over space-saving matters. A bathroom completely fitted with concealed mixers gains a modern character.

Models for concealed installation appeared among washbasin mixers which perfectly combine with countertop washbasins. Their huge advantage is a possibility to install them at any height, which makes them fit all washbasins without an exception.

Product compliance with the standard PN-EN: 817:2008 – Sanitary tapware - Mechanical mixing valves (PN 10) – General technical specifications / PN-EN: 1112:2008 – Sanitary tapware – Shower outlets for sanitary tapware for water supply systems of type 1 and type 2 – General technical specification (for mixers with shower set) / PN-EN: 1113:2015 – Sanitary tapware – Shower hoses for sanitary tapware for water supply systems of type 1 and type 2 – General technical specification (for mixers with concealed set) PN-EN: 1111:2017-09 - Sanitary tapware – Thermostatic mixing valves (PN 10) – General technical specification

# Concealed elements - why are they useful?

Shower area is where it all started with fittings models for concealed installation. These were small cabins where a need for space savings was raised to make bathing as much comfortable as possible. That is why all elements possible for concealing were put under the tiles. With time concealed models started to appear among washbasin, and even bath, mixers, however it is a result of aesthetics and easiness to clean and use rather than necessity to save space. One is for sure – concealed mixers became synonymous to modernity.

Coming back to the roots... Concealed shower mixers are very popular in shower area. Not to many people are aware of the fact that these are suitable for use in more ways. It depends which version is chosen. For those who wish to compose own set, adapted to own individual needs and taste, a perfect basis will be a 2-function concealed shower mixer. With an integrated switch, by using mixer you can control two parts of the set.

In each of concealed sets, the mixer is intended to only open the supply and direct water to the set which is connected to the system with use of a special angular connection (unless an overhead rain shower or a single spout is enough). Thus each element can be set at distances and heights according to own individual needs. However keep in mind some principles as illustrated below.

Who needs a concealed mixer without a shower set?

Contrary to what is believed, a concealed mixer without a shower set included gives us very broad arrangement and functional possibilities. A few variants of connection are available, and each of them allows to get a different functionality.

What is all about this box?

A vast majority of mixers for concealed installation are fitted with a specialized concealed box. It is an enclosure put into a wall, and made of durable plastic to protect the mixer body and cartridge.

The box is installed in the wall by screwing it in four points at corners. Proper setting of the box ensuring correct function of the mixer is facilitated by an integrated mini-level. After connecting to hydraulic system, the box should be encapsulated around by preparing the wall for bonding the tiles. The box interior is protected by a plastic insert in casing colour.

The whole is covered by a decorative front panel once renovation works are complete. With this, elements visible on the tile surface are not exposed to damage during construction works. Finally the lever and the function switch (if applicable) are installed.

# Linear drains – a revolutionary approach to shower area.

Linear drains are one of the most complete product categories in Laveo portfolio. It was prepared to meet expectations of the most demanding customers and installers

In terms of design we made every effort to make linear drains available in a wide range of colours, allowing to match a given model with the installed fittings or select a finish that will suit tiles. Our Customers can choose from two grate types: narrow, minimalistic in form of a steel grate, or reversible – full from one side, and with a possibility of bonding a tile on the other.

The other, key matter for use, were lengths. Due to the fact that shower recesses are still gaining popularity and take various forms, all our linear drains are available in six sizes from 50 to 100cm. Such range allows for furnishing a shower with a width of 50 up to 140cm (according to a specific model).

Our offer includes two drain types – classic floor-type and wall-type, while the latter requires a slope from only one side, rather than four. The construction of our drains allows for installation in low floors.

Drains are made in Poland. In their production highest-quality steel 304 is used. This allows them to be covered by a 10-year\* warranty.

The category is complemented by bathroom accessories designed for drains. These are sloped profiles allowing for aesthetic and comfortable finishing of a shower, and odour trap preventing unpleasant odours from getting out of the sewers.

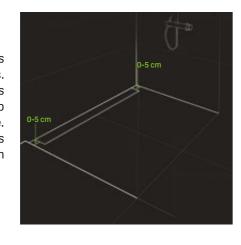

Product compliance with the standard: PN-EN 1253-1:2015-03 - Gullies for buildings - Part 1: Trapped floor gullies with a depth water seal of at least 50mm

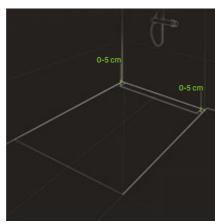

62 LAVEO TRENDY HOME DESIGN LAVEO TRENDY HOME DESIGN

# INSTALLATION OF WALL DRAIN

# INSTALLATION OF WALL DRAIN

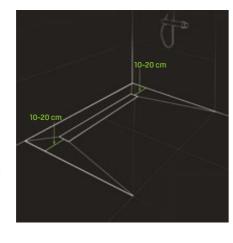

Classic drain, known as floor drain, requires keeping a space from all four sides. The most important are side margins which should be minimum 10cm each up to a maximum of 20cm from each side. This means that to furnish a shower recess with a width of 1 metre, drains with a length of 60, 70 and 80cm will be suitable.

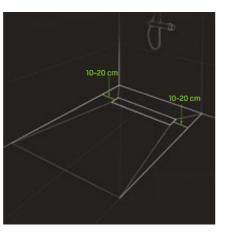

# INSTALLATION OF FLOOR DRAIN

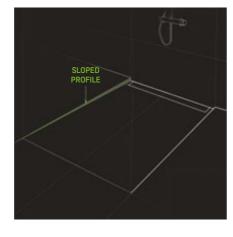

Wall drain, as the name suggests, is installed directly by a wall without an extra space. An obvious advantage of such solution is the possibility of achieving a uniform surface under a shower, by using, e.g. a single large-size tile, for its finishing. Wall drain is installed between edges of a shower or keeping a 5cm margin from the right and the left side. Thus, for a 100cm shower cabin, a drain with a length of 90 or 100cm should be selected.

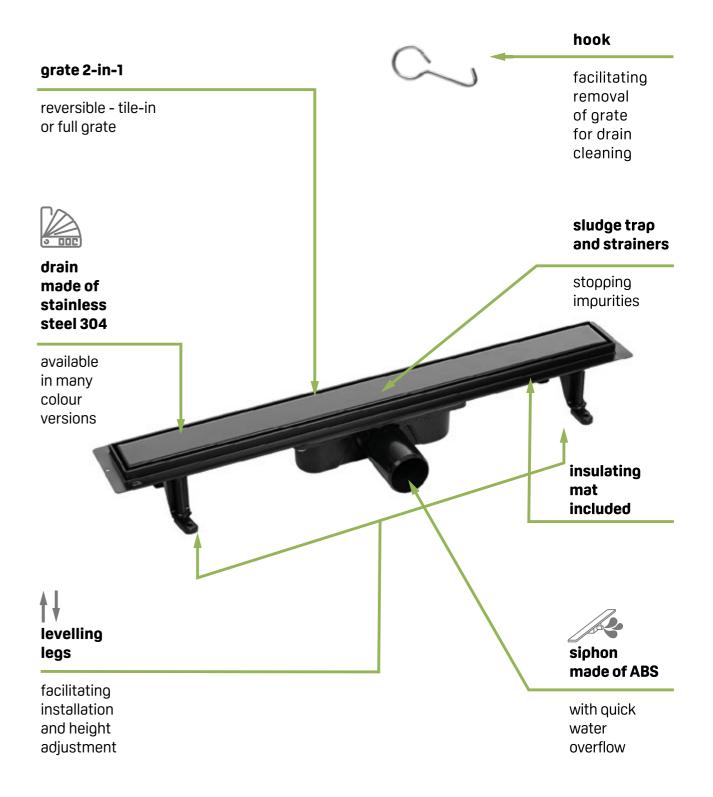

# INSTALLATION OF FLOOR DRAIN WITH SLOPED PROFILE

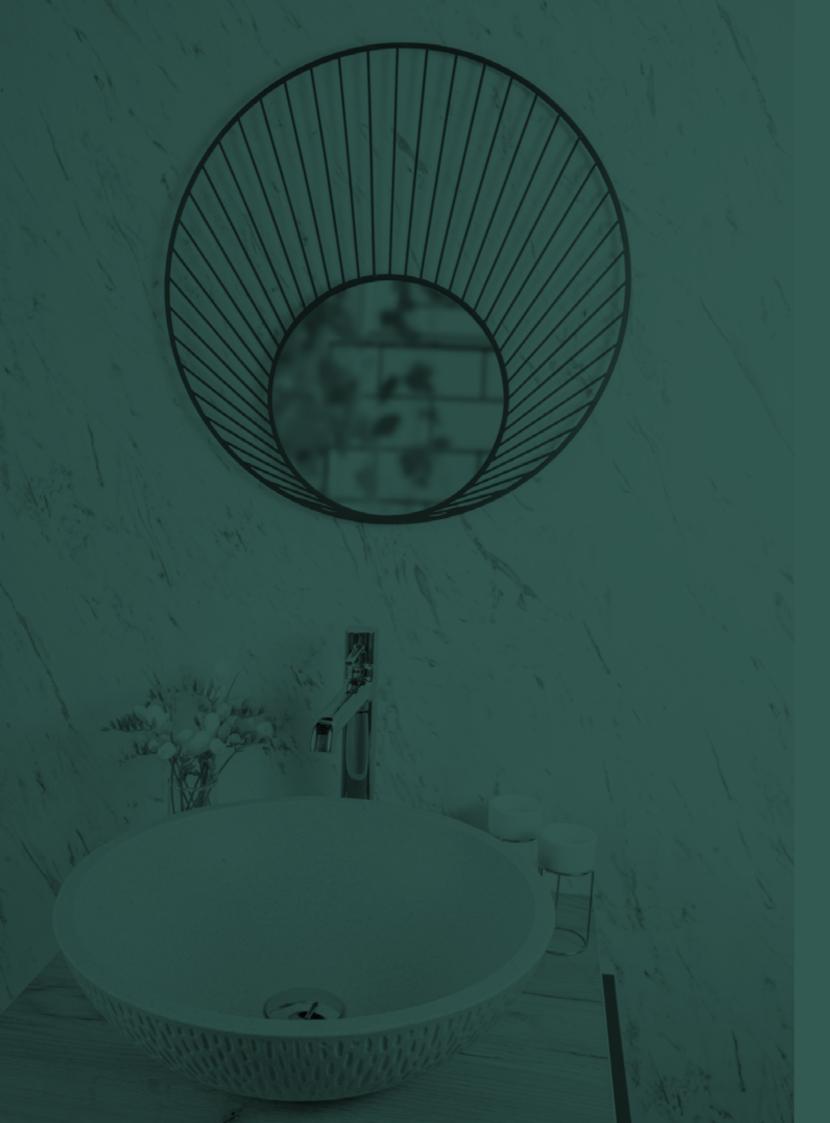

To finish a small space which is created between the floor level and a slope ensuring drainage of water to the drain, it is worth using sloped profiles. It is not only a comfortable but also a very aesthetic solution. Thanks to them, there is no need to cut small pieces of tiles, the laying of which might be a real challenge. Unique properties of the material – steel 304 – ensure many resistance characteristics and high standard of hygiene. Please note that it is essential to select an appropriate version of the profile – right or left, as they are not reversible. Each profile has a length of 120cm and can be cut to measure according to shower recess size.

# **BASSO**

# Variety of styles among washbasins.

Washbasins are another product category in which our passion for variety is readily apparent. It comprises three subcategories which are determined by materials used for production.

For those who seek original solutions we can recommend granite models designed at Laveo and manufactured in own factory. You can choose from among topmount washbasins which perfectly fit trendy consoles and countertop bowls which will suit both small bathrooms in flats, as well as bigger bathing suites. Natural colours of washbasins will allow to warm up an interior (beige granite) and to underline its modern (grey granite) or elegant (black granite) character.

For those who are attached to traditional solutions we can suggest ceramic washbasins which will suit any bathroom without an exception. We developed models designed for countertop installation which give greater arrangement possibilities. They suit standing and wall-hung cabinets, can be mounted on a top and fit with an open, decorative siphon. In addition, countertop installation allows them to be combined with tall upright mixers or concealed models.

Steel washbasins are definitely an option for those who love modern style. Their shape, finish types (black, gold and copper) and material are what you mainly associate with modern style. With a colour-matched click-clack plug included you are sure of a set perfectly selected in terms of colour.

All Laveo washbasins are robust, easy-to-clean and fully functional products.

Product compliance with the standard: EN 14688:2006 - Sanitary appliances - Wash basins - Functional requirements and test methods / Attestation: Certificate of Health Quality of the National Institute of Public Health

# Sanitary ceramics inseparably goes with any bathroom.

Sanitary ceramics is probably the only bathroom furnishing element in which the classic is still on top. Toilet bowl or bidet in a traditional white finish look good in any interior style.

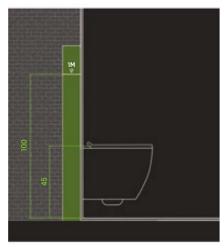

At Laveo we made every effort to ensure that our products first of all are functional and easy to clean. Enamelled surface, rimless bowl and hidden mounting holes allow for problem-free and thorough cleaning.

The category is complemented by slim concealed frame which allows to save space, especially in small bathrooms. It is designed for lightweight construction which means that it can be covered with gypsum plasterboards as well.

Our offer includes four colour versions of dual flush plates. Modest they may look, but received our particular attention and we gave them fully-fledged decorative functions.

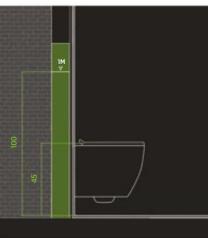

Product is compliant with the standard: PN-EN 14688:2006 – Sanitary appliances – Wash basins – Functional requirements and test methods / PN-EN 14528:2007 – Bidets - Functional requirements and test methods / PN-EN 997:2018-11 – Toilet bowls and toilet sets with integral water lock/ PN-EN 14055:2018 –WC and urinal flushing cisterns When choosing a concealed frame for bathroom, you can decide on one of as many as three possible methods of installation. This is a clear advantage not only for users but most of all for installers who may decide which solution will be the quickest, the most practical and cost-efficient in a particular investment. Each method is good and none of them has practical drawbacks. The choice is a matter of possibilities, habits and taste.

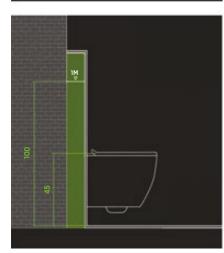

#### **INSTALLATION IN WALL**

Concealed frame can be installed in a carved or specially prepared (at design stage) recess in a wall. Such solution is recommended especially for small-size bathrooms, as no precious space is lost.

#### **INSTALLATION ON WALL** WITH HOUSING

In larger rooms a frame can be installed by bringing it closer to a wall without a need to prepare an opening where it is supposed to hide. When choosing this method you have a possibility to cover the front of the frame with gypsum plasterboards which allows to obtain a uniform wall from the floor up to the ceiling.

#### **INSTALLATION WITH SHELF**

Concealed frame gives a possibility to construct a practical shelf above a toilet bowl. This way, in small-sized bathrooms you can gain additional space for storing cosmetics or placing decorations as flowers, posters or decorative air fresheners

included: click-clack plug, connecting hoses 40 cm, easy assembly system

Even in a bathroom in a flat without any window you can grow pot plant. It is important to choose shade species which, for their growth, require a high humidity.

Among them are plants which are popular in Poland such as ferns, beautiful flowering Spathiphyllum and Anturium, Cyperus and Codiaeum with lavishing plumes and multi-colour leaves.

FINISH: GRAPHITE CODE: BAO\_922D EAN: 5907791147011

Mixer is fitted with movable NEOPERL aerator to aerate water stream. Water stream angle adjustment allows to adapt a mixer to a washbasin, thus to set a preferred stream reach.

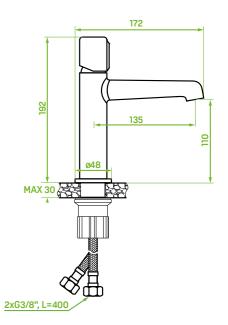

spout reach: 135 mm

ceramic cartridge: 25 mm

flow class:  $Z \le 9 I/min$ 

included: click-clack plug, key for aerator, connecting hoses 40 cm, easy assembly system

Due to the fact that the average height of the human population has increased, relevant standards according to which washbasins should be installed, are also changed. You should be able to wash your hands in a washbasin without leaning. Standard height for washbasin installation, according to European standards, is 85-95cm, whereas it is assumed that at this height the upper edge of the bowl, counting from the floor, should be located.

type of hose: silicone coated rubber

length of hose: 1500 mm

overhead rain shower size: Ø250 mm

included: shower set, concealed box, elements for surface-mounting and concealed installation

To improve condition of skin, its colour, suppleness, it's of great importance to use the so-called alternate shower.

Such bathing should be as follows:

- set hot water (about 38° C) bathing time about 1 minute.
- set cold water (about 20° C) bathing time about 30 seconds.
- return to hot water stream.

Each time shower from feet to the head. The whole should not take longer than 10 minutes.

for concealed installation with shower set

type of hose: metal braided rubber

length of hose: 1500 mm

overhead rain shower size: Ø200 mm

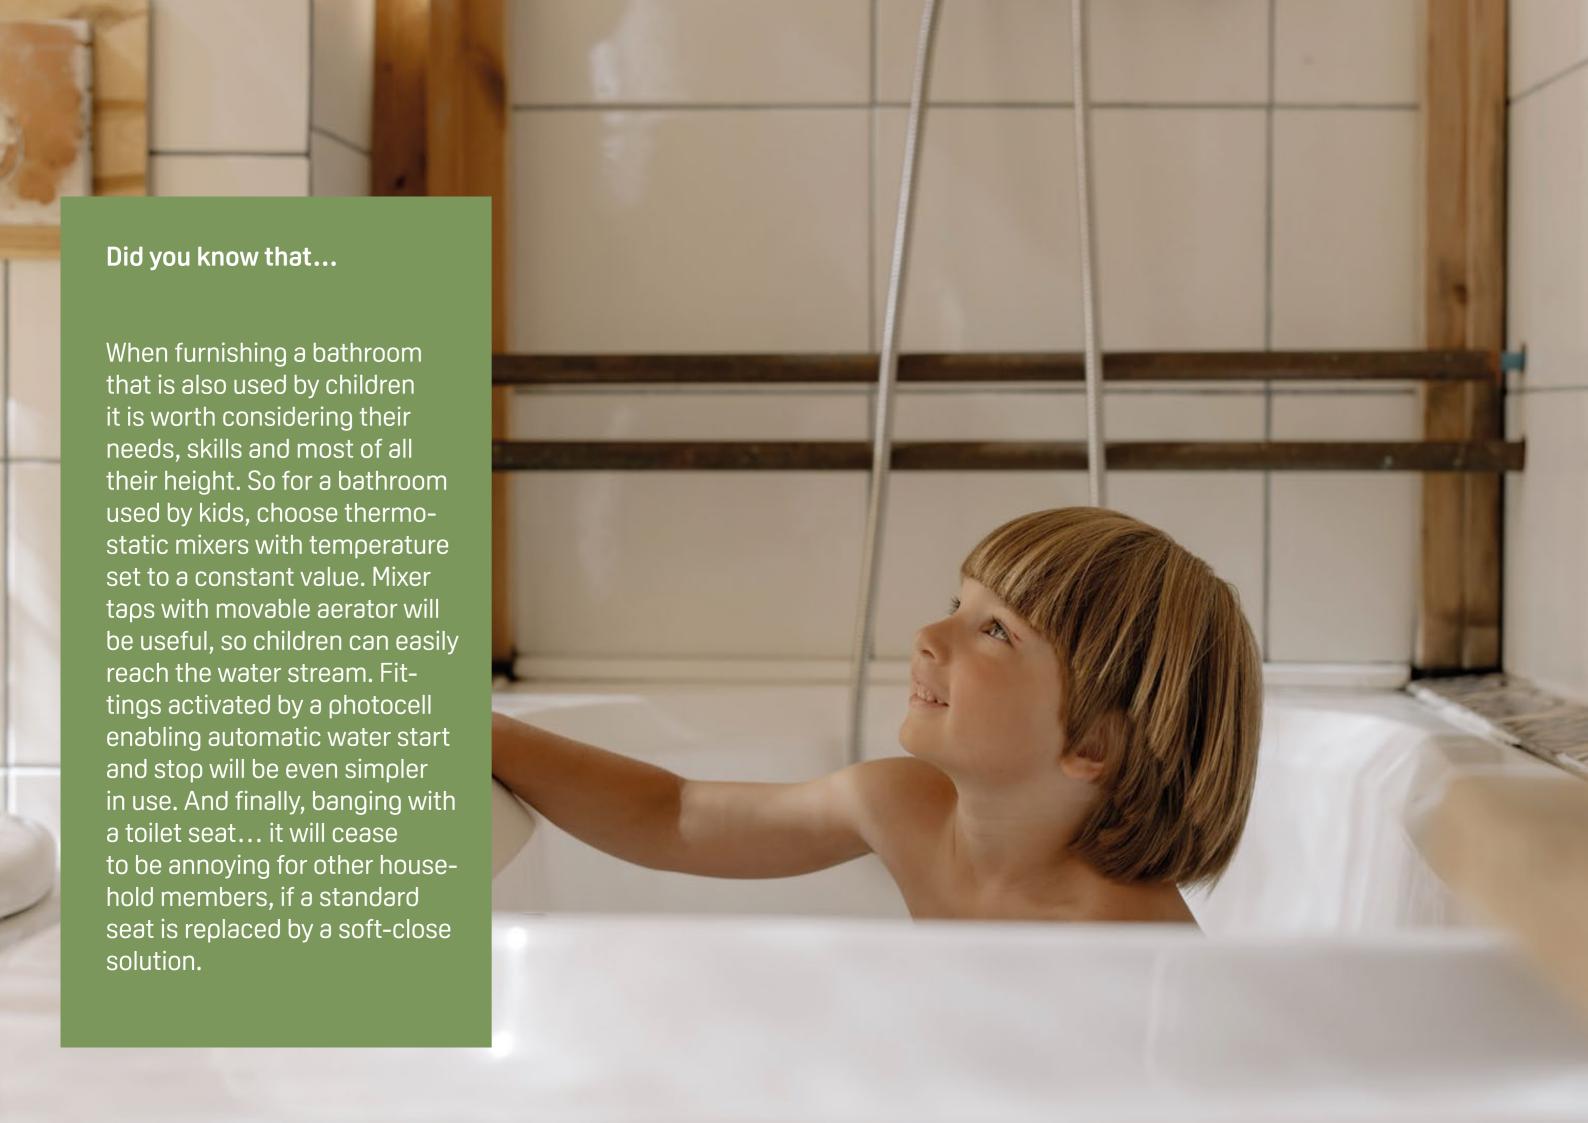

Fittings and showers will last longer if limescale is removed on a regular basis. Therefore it is worth using anit-calc system. For thermostatic mixers, once every few months it is recommended to turn the cartridge to the fullest to prevent collection of thick limescale layer.

## Pinar series

#### bath mixer

wall-mounted, without shower set

FINISH: BLACK CODE: BAW\_710D EAN: 5907791184634

material: brass

spout reach: 175 mm

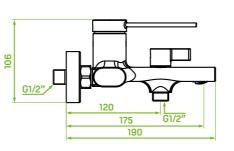

ceramic cartridge: 35 mm

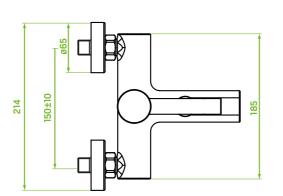

flow class: spout A  $\leq$  15 l/min, hand shower S  $\leq$  19,8 l/min

included: key for aerator, mounting elements

Mixer is fitted with movable NEOPERL aerator. Water stream angle adjustment allows to adapt a mixer to a washbasin, thus to set a preferred stream reach.

A switch with a minimalistic design, located in the shower column in an invisible place under the mixer, provides an easy access to function switching.

material: brass, steel, plastic

ceramic cartridge: 35 mm

flow class: overhead rain shower A ≤ 15 l/min,

hand shower Z ≤ 12 I/min

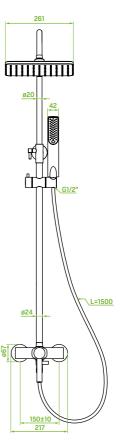

type of hose: metal braided rubber

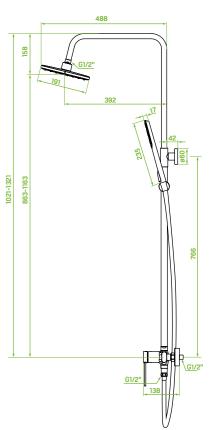

length of hose: 1500 mm

overhead rain shower size: 261x191 mm

CODE: PAW\_70KB EAN: 5907791184696

Water running from the tap when brushing teeth (3 minutes=15 L) or shaving (10 minutes=100 L), has an impact on bills for water to pay. We assume that it need not be explained that small green habits, as closing the water tap, globally are extremely important for the Earth, especially when we are about to face drought.

cartridge - start/stop: 35 mm

flow class: spout A ≤ 15 l/min. hand shower S ≤ 19,8 I/min

included: mounting elements with check valve

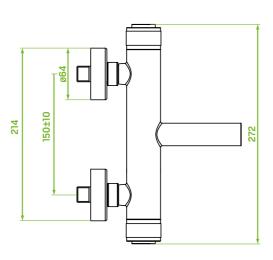

LAVEO TRENDY HOME DESIGN

An elegant and universal model. Decorated knobs, thanks to a special texture, facilitate operation even with wet hands. Mixer is fitted with a start/stop cartridge for closing and opening water flow by pushing a button at the body right\*. The knob on the right is for water temperature adjustment, while on the left – for switching the stream between spout and hand shower. The button is a solution for easy opening of the water stream, e.g. for bathrooms used by children.

\*Fittings started by button, possibility to adjust the intensity of water outflow with the function switch.

LAVEO TRENDY HOME DESIGN

With start/stop cartridge opening and closing the water stream is effected by pushing a button located on the top of the mixer\*. Temperature adjustment takes place by turning the knob either to the left or to the right. Mixer with ECO function with low water flow.

\*Fittings started by button, possibility to adjust the intensity of water outflow with the function switch.

ceramic cartridge: 35 mm

flow class: spout A  $\leq$  15 l/min, hand shower A  $\leq$  15 l/min

included: mounting elements

Mixer with foldable spout, which can be hidden, allows to gain more space, and thus comfort in the shower area. Spout position determines water outflow point. When it is hidden in the mixer body, water will run from hand shower, and when the spout is set perpendicularly to the mixer body, water will run directly to the bathtub.

Alea 3-hole bath mixer is designed for upright installation directly on a bathtub or in a shelf covered with tiles. Shower hose is concealed under tiles or bathtub.

sensor, with external temperature control

material: brass

spout reach: 129 mm

flow class: Z ≤ 9 I/min

sensor cartridge: 25 mm

included: transformer 100-230 V AC, 50-60 Hz or powered

with AA batteries; temperature controller, key for aerator,

connecting hoses 40 and 45 cm, mounting elements

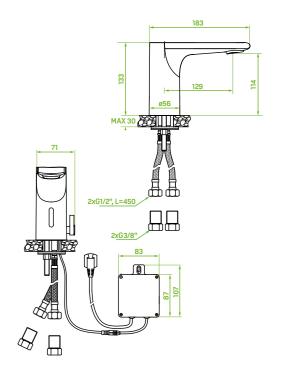

spout reach: 129 mm sensor cartridge: 18 mm

flow class: Z ≤ 9 I/min

included: transformer 100-230 V AC, 50-60 Hz or 4 x AA batteries; key for aerator, connecting hoses 45 cm, mounting elements

Sensor mixer activated by photocell through getting hands near motion detecting sensor. The mixer stops automatically after they are taken away. Safety switch triggers after 60 seconds. Motion sensing area is 12-18 cm. Water temperature adjustment, depending on model, is effected by setting a knob integrated with the mixer body or a controller provided under the top. Sensor operation reduces contact with bacteria and viruses. This is a solution for bathrooms used by small children who forget to switch water off. The mixer, when installed in a public place, will have a positive effect on reduction of water consumption and thus bills.

Column fitted with a functional and aesthetic two-sided holder for bathroom accessories.

When turning your bathroom to a home SPA and preparing a bath with addition of natural ingredients such as petals of flowers, or leaves on your own, please note that they should not be scattered directly into the bathtub. Before such ingredients are immersed in water, they should be put in a cotton or mesh bag. This will facilitate cleaning after bathing and reduce a risk of clogging the outlet.

Water stream is changed with a button located in hand

Hand shower with the so-called water spray function, will not only help to hydrate the skin but also provide a gentle massage, relaxing as many as 70 face muscles. Such beneficial face baths are invaluable for keeping young appearance of the skin and slowing down the ageing process.

### Did you know that...

Shower gives many possibilities to take care of skin of the whole body. For instance, it is much comfortable to complete peeling of the whole body under a shower rather than in a bathtub. What is more, self-massage is possible under a shower, with use of variable hand shower streams. For this, it is worth choosing one with 3 or even 5 streams.

### Volumo series

#### shower mixer

thermostatic, for concealed installation with shower set

FINISH: BLACK CODE: BAV\_70TP

0 0

Mixer fitted with special thermostatic cartridge allows to set a desired water temperature, the same any time the stream is activated. It gives a possibility to set a desired constant water temperature, without a risk of burns. This solution is popular in flats occupied by elderly people and families with small children for safety

\*Fittings started by button, possibility to adjust the intensity of water outflow with the function switch.

Bath and shower mixer is a 3-in-1 option. With innovative constructional solutions it is suitable for:

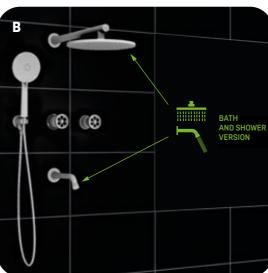

- bathtubs with screen
- bathrooms with bathtub installation with spout
- shower cabins installation with overhead rain shower.

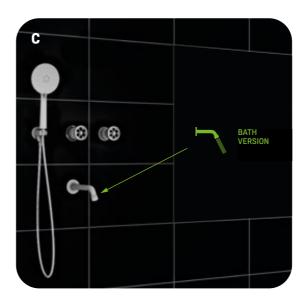

Resigning from selected elements is possible by stopping a corresponding hole as specified in assembly instructions.

### Did you know that...

It is usually a sponge that is a hotbed for bacteria in a bathroom rather than a toilet bowl. Assuming that a toilet bowl is regularly cleaned using strong anti-bacterial agents, there will be less grown microorganisms than on a sponge which is constantly exposed to use in a humid environment under a shower or on a bathtub. If it is possible, give up using a sponge or at least replace it very often.

## Did you know that...

A hot shower will work after a training session, help loosen tense muscles after a physical effort and simply relax. However water temperature should not exceed 38°C. It is no coincidence that mixers with thermostatic cartridges are recommended to be set to this temperature value.

## Did you know that...

When choosing a bathroom drain, you can make its installation easier for tile layer by selecting an adequate sloped profile. This additional element which can be cut according to own needs, will facilitate obtaining a necessary slope, required for water to drain, without having to cut tiles precisely and lay small pieces.

FINISH: GOLD CODE: CKK\_G2R3 EAN: 5907791180902

material: brass

size: 63x70-110x63 mm

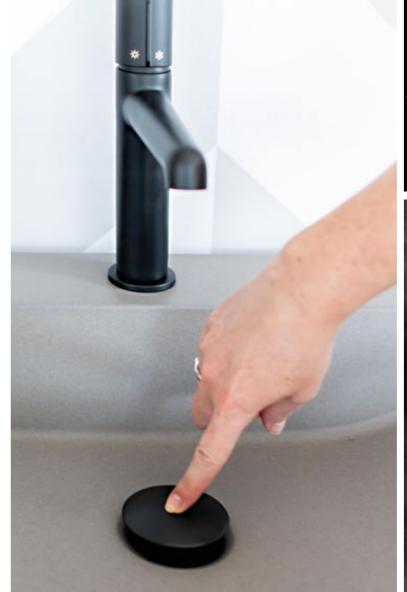

diameter: G 11/4"

Click-clack system allows to cut off water outflow quickly and comfortably with a touch of a finger. Model fitted with an extended sleeve which fits washbasins with and without overflow. Possibility to select according to fittings colour.

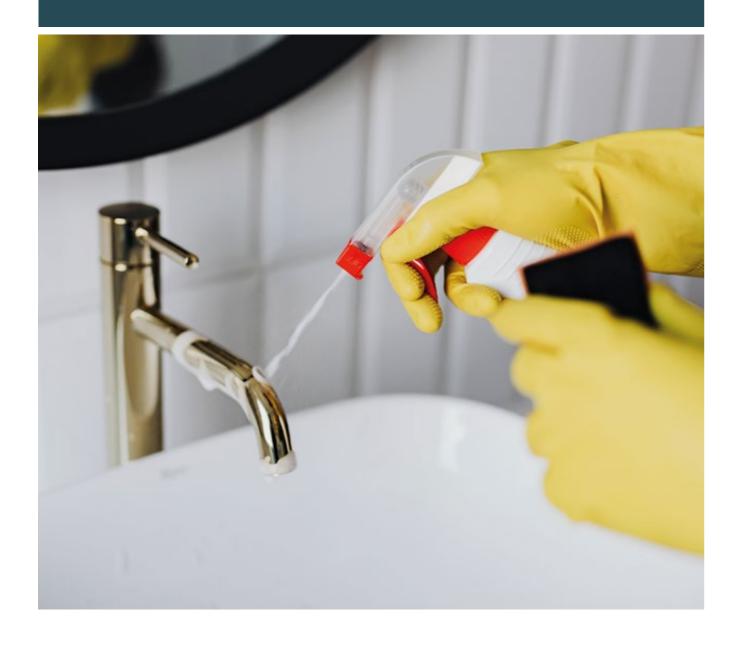

# WASHBASII

### Did you know that...

When removing limescale from fittings on a regular basis, especially from hand showers and aerators, you can extend life of bathroom furnishing elements, and thus you give a small contribution to environmental-friendly measures.

To make limescale removal from hand showers easier, Laveo fit them with anti-calc system, and supply mixers with a special key for easy removal of aerator for cleaning from limescale.

### Did you know that...

Before you call a plumber it is worth trying some home methods to unclog blocked washbasin outlet. To do this, remove click-clack plug, pour ½ glass of soda, pour ½ glass of vinegar and stop the outlet with a cloth. As a result of chemical reaction, a foam should start to form, and after about 30 minutes pour the foam with boiling water.

<sup>\*</sup>preparation suitable also for granite and steel washbasins

### Did you know that...

The following should not be thrown to the toilet: dental floss, paper towels, sanitary towels/tampons, cat litter, grease, cotton pads, hair, cigarettes, wound plasters.

Otherwise, as the Hydraulic Emergency Service suggest, you can clog the sewers. No medicines should be thrown to the toilet, either, due to a risk of contamination of ground water flora.

LAVEO TRENDY HOME DESIGN 325

## **Pictograms** / key

POLISH

Marking of products which are completely made in Poland
– from design to production.

DESIGNED

Models designed by members of Laveo design team.

GRANITE

Models made of granite, adequately selected mix of sand and resin, ensuring numerous resistance characteristics.

VARIETY

Models available in various colour versions.

MOVABLE

Spout enabling 360° rotation. Improves functionality of the mixer and allows to obtain a larger useful

CERAMIC SHOWER SWITCH

Rotary switch that - unlike pull-out switches – works regardless of water pressure. It is used for switching between spout/overhead rain shower and hand shower. Ceramics guarantees longer life.

Possibility to switch functions with use of a comfortable button provided on the mixer body or on hand showers.

CLICK-CLACK

Plug for closing and opening outflow of water from washbasin with a single push from the top.

THERMOSTATIC

Thermostatic cartridge allowing to set a constant water temperature. There is no need to look for an optimum setting of lever when using the shower each time, so you save time, energy and reduce water consumption. According to research, the most comfortable temperature for human body is 38°C.

Mixer body not subjecting to heat. Even after setting the highest water temperature, surface of the mixer will remain cool. Guaranteed use safety for elderly people and children.

Model in which water stream is activated by bringing hands closer to a special sensor. The mixer is operated without hands. Product reducing water consumption.

#### START/STOP CARTRIDGE

Mixer opening and closing water flow with use of a button. Allows for mixer operation with one finger after a single press.

#### AUTOMATIC

Plug for closing and opening outflow of water from washbasin by pulling or pushing the string provided in the

#### ASSEMBLY

Special sleeve allowing for installation of mixer without having to use any tools. Possibility of quick installation on one's own, without an expert

#### SHOWER SET INCLUDED

Mixer with a set comprising shower hose, hand shower and hand shower bracket.

#### LENGTH

Bar with a length of 70 cm ensuring wider range of height adjustment of hand shower bracket. Facilitation in showers which are used by adults and children of various height.

#### DOUBLE-KNOB MIXER TAP

Mixer in which two knobs are used for water temperature adjustment. Separate ones for cold and hot

#### CARTRIDGE WITH ROTATION ANGLE OF 90°

Movement range limited to 90° to enhance water adjustment and shorten the time required to set a desired temperature. Fitted in double-knob mixers

#### WATER

Low flow class allowing for significant reduction of water consumption. Lower water consumption means reduced bills.

#### NEOPERL AERATOR

Spout end designed for increasing volume of water stream through its aeration. Reduction of water consumption.

#### ADJUSTABLE FITTING SPAN

Possibility to adjust fitting span allowing a shower to be installed in old holes left after the previous

#### ADJUSTABLE HEIGHT OF OVERHEAD RAIN SHOWER

Possibility to adjust a height at which overhead rain shower should be set, allowing to adjust a shower to the user's height.

#### STREAM

Basic stream which ensures optimum use of a shower for everyday bathing.

#### HYDROMASSAGE STREAM

Intensive stream allowing for effective relaxation of tense muscles. It also have a positive effect on suppleness of the whole

#### ANTI-LIMESCALE

Aerator with a function for quick and comfortable removal of limescale left by hard water. Limescale removal is effected by precipitation from rubber protrusions when sliding them with a finger.

Aerator allowing to change water outflow angle. It gives a possibility to set the stream so water is not solashed to the sides, e.g. walls in shallow washbasins.

Aerator with a crosswise slot for opening with use of a coin. Possibility to remove without having to use special

#### FOLDABLE

Swivel spout additionally being a switch for switching between shower set and mixer. After folding the stream is directed to shower hose, and after unfolding water runs from the spout.

Wide, constant stream being result of a special flattened shape of the spout.

#### SOFT STREAM

Gentle stream which is obtained by aerating water. Perfect for long and relaxing baths.

#### SPRAY STREAM

The most gentle stream available in showers. Intended for washing face and gentle and irritated areas.

Stream combining two water intensities – usually rain and hydromassage. Allows for use of two outflow types at once with an intermediate switch

# Pictograms / key

STOP FUNCTION

Possibility to stop water stream directly in hand shower without having to turn water off with use of mixer.

SELF-CLEANING

System removing limescale left by hard water with use of special needles provided in nozzles. Activated with a button provided on hand shower or overhead rain shower.

ANTI-CALC

Special silicone protrusions in hand showers and overhead rain showers which allow for limescale removal and ensure nozzle permeability. Just slide hand over them to remove limescale.

ANTI-TWIST

System preventing unaesthetic tangling of shower hose and facilitating putting hand shower back in the bracket.

HIGH LOAD CAPACITY

Frame is resistant to loads of up

ALL CONNECTIONS INCLUDED

The set includes all elements necessary for installation. There is no need to buy separate parts.

#### PRODUCT WITH ATTESTATION

Model with attestation of the National Institute of Public Health. Confirmation of compliance with current safety standards (human health and natural environment).

RESISTANT

Material resistant to differential temperature between 0 and 90°C.

STRETCH

Flexible shower hose which can extend its original length by 20%.

RIMLESS TOILET BOWL

Toilet bowl in which the whole surface is enamelled. Easy to clean. No difficult-to-reach recesses in which dirt and bacteria could collect.

#### EASY

Surface on which limescale left after hard water is hardly visible. Smooth texture facilitating cleaning.

#### CONCEALED

Specialist casing ensuring free access to enclosed parts of mixer for their maintenance or possible replacement. Integrated mini-level facilitates correct installation of a mixer.

#### RESISTANT TO TEMPERATURES UP TO 190°

Material resistant to high temperature of up to 190°C.

#### IMPACT-RESISTANT

Material resistant to damages which can result after dropping small objects on the product from a low height.

#### SCRATCH-RESISTANT

Material resistant to scratches which can be caused during everyday use.

#### DISCOLOURATION-RESISTANT

Material on which, with correct use of the product, no permanent signs after discolourations remain.

#### EUROPEAN QUALITY OF CARTRIDGE

Models fitted with high quality cartridges supplied by the Spanish -based manufacturer QUORE. Standard compliant with European certification.

#### TOILET SEAT

Toilet bowl fitted with a soft-close toilet seat with quick release system.

#### CLOSE

Mechanism slowing down the falling of a toilet seat. Prevents loud banging when falling quickly.

#### RELEASE

Possibility to detach a toilet seat from a toilet bowl with use of a button. Facilitating thorough cleaning of a toilet seat and bowl.

#### LOW HOUSING (52, 58 MM)

Construction of linear drain allowing for installation in low floors, e.g. in flats.

#### QUICK WATER OVERFLOW (24, 50 L/MIN)

Construction of outlet and siphon ensuring quick draining of water from a shower to the sewers.

#### OUTLET 44

Standard diameter of an outlet allowing to install any washbasin

#### SERVICE AT CUSTOMER'S LOCATION

Products covered by nation-wide service at customer's location. Applicable throughout the whole warranty period for a particular

#### INCLUDED

Dual flush plate which allows to adjust water flush volume according to the needs.

#### SLIM FRAME

Thin construction of a frame with a depth of 100 to 175 mm, allowing for installation in small-sized bathrooms.

#### SILENT OPERATION

Noise resulting from filling of cistern is limited to 9dB thanks to water cistern soundproofing with expanded polystyrene.

#### ADJUSTABLE

Possibility to change flush volume between 2/6.26 L to 3.25/7.5 L with a knob located under the flush plate. Additional adjustment outside dual flush plate.

58 mm

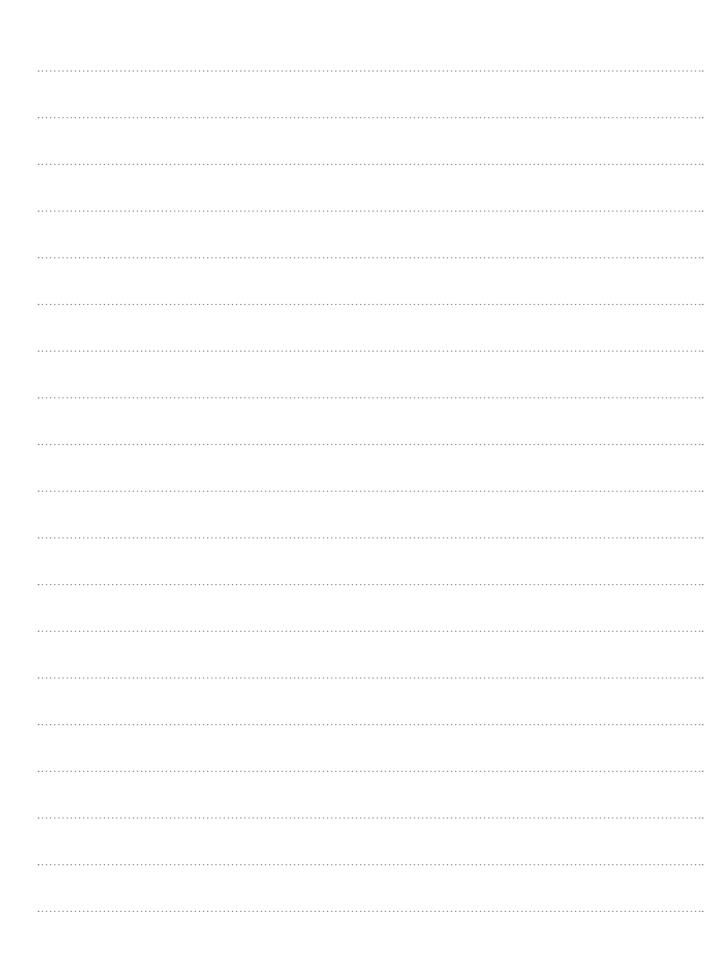

**10**\*

#### WARRANTY

Specification of warranty period for a particular product. For detailed warranty conditions for product components please refer to warranty cards of particular models.
